

Amphibians: Fill in the Blank

Look here in the water! We're the amphibians! We're not in the _____ all the time, but we do need to keep our _____ wet, and we always go to the water to lay our _____.

Do you know us? We include the long-legged, jumping _____, and his relative, the bumpy _____. Salamanders and newts are also _____.

We are cold-_____, like the reptiles. (That's also called being ectothermic), but we don't need to be as warm, and we definitely don't lie out in the hot _____. That would dry out our delicate _____. Our skin easily lets water both out and _____, so we need to be careful. Our skin also allows _____ to pass through.

We lay our eggs in the _____ because they eat their way out of that soft _____, they are called _____. They stay in the water while they wait to grow front and back _____. And if they are frogs or toads, their long _____ disappears. That whole big change has a big word: _____. When we are adult, we love to catch those six-legged _____ insects on our sticky_____.

Please help take care of our rivers, streams, and lakes, and you'll be taking care of us!
